AZIPYRIN TABLETS
ANTHELMINTIC FOR DOGS AND CATS

COMPOSITION:

Each tablet contains: Praziquantelum 50 mg; Pyranteli pamoas 150 mg

Excipientes: Lactosum monohydricum, Tritici amyllum, Povidonum, Talcum, Magnesii stearas – ad 600 mg.

ACTION:

Azipyrin tablets combines the cestocidal action of Praziquantel with the nematocidal action of Pyrantel. Praziquantel causes spastic contraction of the muscular elements of tapeworms, vacuolization and destruction of tegumentum followed by paralysis, lysis and death of the parasite. Pyrantel pamoate blocks the neuromuscular conduction of roundworms (a cholinergic agonist) by permanent postsynaptic membrane depolarization, paralysis, death, and spontaneous roundworm discharge with feces.

INDICATIONS:

For treatment of cestodiasis and nematodiasis of carnivora (dogs and cats) caused by Echinococcus granulosus, E. multilocularis, Taenia pisiformis, T. hydatigena, T. multiceps, T. taeniaeformis, Dypylidium caninum, Trichurus vulpis, Toxocara canis, T. mistax, Toxascaris leonina, Ancylostoma caninum, and Uncinaria stenocephala.

CONTRAINDICATIONS:

Azipyrin is not recommended to be used in puppies and kittens younger than 4 weeks. Azipyrin should not be used concomitantly with levamisol, piperazine, and organophosphoric compounds.
METHOD AND ROUTE OF ADMINISTRATION:
Oral use, by directly placing the tablet on the tongue base or with a little favourite food quantity.
